An age-friendly health system is one where every older adult gets the best care possible.

The Age-Friendly Health Systems 4Ms framework is a reliable set of evidence-based geriatric best practice interventions for older adults.

Implementation of the 4Ms has been successful in large part due to action communities.

When the 4Ms framework was applied, health leaders noticed this model created a feasible and actionable plan across the care continuum.

Creating an age-friendly health system requires an interprofessional approach.

So, what are the cost benefits from implementing age-friendly care?

An esteemed panel of experts, including Terry Fulmer of The John A. Hartford Foundation, Kedar Mate of the Institute for Healthcare Improvement, Marie Cleary-Fishman of the Health Research and Educational Trust, Julie Trocchio of the Catholic Health Association of the United States, and Denise Lyons and Patricia Curtin of the Christiana Care Health System came together on August 7, 2019, for a webinar which can be accessed at www.ModernHealthcare.com/AgeFriendlySystems.
